

## **Urine Diversion Dehydration Toilets (UDDT), Mahabalipuram, Tamil Nadu, India**

The project comprises of 3 UDDTs squatter families; 1 UDDT each for 3 families of having 5 members in each family. The UDDT diverts urine, fecal matter and anal cleansing water into separate collection chambers. Urine and fecal matter are sterilized and composted respectively and being reused as a natural fertilizer in their gardens. Before construction of UDD toilets, wastewater from all the toilets in the project site was directly discharged into their gardens. This technology includes minimal maintenance expenditure along with large reuse potential output.
